RALSTON WELL.

Analysis of The Water Has
Been Received.

Dr. W. A. Lackey, who sent away
for analysis a sample of the water
from the new mineral well of Frank
Ralston, has received a report as
follows:

One gallon contains 508.8 grams of
mineral matter (8.724 grams per lit-
er) composed of sodium chloride,
sodium sulphate, calcium carbonate,
magnesium carbonate, sodium sul-
phite and sodium carbonate. There
is a distinct test for iodides, faint
traces of bromides, iron, and silica,
no traces of potassium sulphate
and lithium carbonate. There are
6.6 grains per gallon of free and
combined hydrogen sulphide.

"This is an alkaline salt-sulphur
water, sodium chloride (common
salt) and sodium sulphate (Glauber's
salt) being the main constituents."
The water has medicinal qualities
for kidney, liver and stomach
troubles. The water can be obtain-
ed at the drugstores of Cook
and the Coates Company.
